1. Introduction

1.1 Background

The Department of Defense (DoD) Air Force Continuous Acquisition and Life-Cycle Support (CALS) Test Network (AFCTN) is conducting tests of the military standard for the Automated Interchange of Technical Information, MIL-STD1840A, and its companion suite of military specifications. The AFCTN is a DoD sponsored confederation of voluntary participants from industry and government managed by the Electronic Systems Center (ESC).

The primary objective of the AFCTN is to evaluate the effectiveness of the CALS standards for technical data interchange and to demonstrate the technical capabilities and operational suitability of those standards. Two general categories of tests are performed to evaluate the standards; formal and informal.

Formal tests are large and comprehensive, which follow a written test plan, require specific authorization from the DoD, and may take months to prepare, execute, and report.

Informal tests are quick and short, used by the AFCTN technical staff, to broaden the testing base. They include representative samples of the many systems and applications used by AFCTN participants. They also allow the AFCTN staff to gain feedback from many industry and government interpretations of the standards, to increase the base of participation in the CALS initiative, and to respond to the many requests for help that come from participants. Participants take part voluntarily, benefit by receiving an evaluation of their latest implementation (interpretation) of the standards, interact with the AFCTN technical staff, gain experience using the standards, and develop increased confidence in them. The results of informal tests are reported in Quick Short Test Reports (QSTRs) that briefly summarize the standard(s) tested, the hardware and software used, the nature of the test, and the results.

1.2 Purpose

The purpose of the informal test, reported in this QSTR, was to analyze Gateway Conversion Technologies' interpretation and use of the CALS standards in transferring technical publication data. Gateway used its CALS Technical Data Interchange System to produce data, in accordance with the standards, and delivered it to the AFCTN technical staff on a 9-track magnetic tape.

2. Test Parameters

Inset Systems HiJaak Window v1.0

Corel Ventura Publisher

Standards

Tested:

MIL-STD-1840A

MIL-M-28001A

MIL-R-28002A

3. 1840A Analysis

3.1 External Packaging

The tape arrived at the Air Force CALS Test Bed (AFCTB) enclosed in a box in accordance with ASTM D 3951. The exterior of the box was marked with the magnetic tape warning label, as required by MIL-STD-1840A, para. 5.3.1.3.

The tape was enclosed in a barrier bag as required by MIL-STD-1840A, para. 5.3.1.2. Inspection of the tape reel showed the label indicating the recording density, as required by MIL-STD-1840A, para. 5.3.1. A packing list, showing all files recorded on the tape, was not included.

3.2 Transmission Envelope

The 9-track tape received by the AFCTB contained MIL-STD-1840A files. The files were named per the standard conventions.

3.2.1 Tape Formats

The tape was run through the AFCTN *Tapetool* v1.2.8 utility, with no reported errors. The tape was also read using TI's *Tapetool* with no reported errors. The tape was read using AGFA's *CAPS read1840A* without a reported error.

3.2.2 Declaration and Header Fields

There were no reported errors in the Document Declaration file or data file headers.

The physical structure of the tape meets the CALS MIL-STD-1840A requirements.

4. IGES Analysis

No Initial Graphics Exchange Specification (IGES) files were included on this tape.

5. SGML Analysis

The SGML file on this tape was short and was visually inspected. The file basically calls the 23 Raster images into a document. No errors were noted during the inspection.

6. Raster Analysis

This tape contained 23 Raster files. All files were evaluated using the AFCTN *validg4* utility which reported no errors. The files were read into the AFCTN *calstb.475* viewing utility without a problem. It was noted that several of the images appeared to be scanned at a slight angle. The overall quality of the images was good with no orphan pixels noted.

The AFCTB has several tools for viewing Raster files. These tools are not used to generate a pass/fail but to report how commercially available software can handle the files. Many of these products are used in the development of technical publications and are good indicators of usability. The use of these products is not an endorsement nor an indication of CALS capability. All operations were performed using the default settings.

File D001R001 was selected for the hard copy output of these evaluations. The file was converted using Arbortext's *g42tiff* utility without a problem. The resulting file was read into Island Graphics' *IslandPaint*, displayed and printed.

The file was imported into Inset Systems' *HiJaak for Windows* without a reported error. The file was displayed and printed without a problem.

The file was read into IDA's *IGESView*, displayed and printed without a reported problem.

The file was converted using Rosetta Technologies' *Prepare* with the resulting file being read into *Preview*. No problems were encountered during this process.

All files were converted using Inset Systems' *HiJaak for DOS* without a problem into an IMG format. The resulting files were read into Corel's *Ventura Publisher*, displayed and printed. The entire document is included in the Appendix of this report.

The Raster files meet the CALS MIL-R-28002A specification.

7. CGM Analysis

No Computer Graphics Metafile (CGM) files were included on this tape.

8. Conclusions and Recommendations

In summary, the tape from Gateway Conversion Technology was correct. The tape could be read properly using all of the tape reading utilities available in the AFCTB, without any reported error. The physical structure of the tape meets the CALS standards.

The SGML file meets the CALS MIL-M-28001A specification.

All 23 Raster files meet the CALS MIL-R-28002A specification.

The tape and data files provided to the AFCTB meet the CALS MIL-STD-1840A requirements.
